# Proposed Vert Ramp

## Design Summary based on Feedback

A wider vert ramp is critical for optimal performance and ongoing participation.

Tampa specifications ranked highest: 10' 6" with 1' 6" vert (3150mm with 450mm vert), noting that 11' and 14' vert ramps were both requested, but not in a majority.

A steel surface is preferred for the vert ramp and 14' flat (4200mm) requested due to the fast riding surface.

Extensions and a channel were the highest vert ramp style choice, but only if the ramp could be 48' (14400mm) or wider, so these have not been included in the concept design.

### "Double the width of both ramps and keep it simple"

Rotating the vert ramp anti-clockwise to have a closer north-south orientation was requested and is reflected in the design.

Stairs have been located at each end and from different directions to allow for the best access from entry/exit points.

Rounded corners have been used to improve sightlines and access around the vert ramp's perimeter walls.

The request for a vert ramp, feedback and detailed specifications was predominately from skateboarders.

## Consultation Rankings (Top 5)

1. Tampa
2. Grosso / Vans
3. Riley Hawk's
4. 11ft specification / 4DWN
5. Berlin

## Proposed Specifications

Transition: **10' 6" (3150mm)**

Vert: **1' 6" (450mm)**

Width: **40' (12000mm)**
